MAIN POINT

The thing that has the biggest impact on rankings is consistent driving to your location using Google Maps navigation.

We use a network of 100,000+ real Google users – to search for keywords in Google search.

The same thing happens with the Google Maps app – users interact with your profile in the app, visit your website, drive to your location, and many other smaller actions.

These are all positive signals that Google algorithm uses to evaluate your business and its ranking.
